

Find The Hole

Very minimalistic UI and simple gameplay with one touch controls.

Your only goal is to rotate the maze and make ball fall into the hole.

Game has 51 levels, try to complete them all.

How to use this project?

Just open “mainMenu” scene from “Scene” folder and whole game will be ready for you.

Scripts

Scripts If you need to edit/change some code here is what you need to know about scripts:

BallLogic.cs – Used to detect if ball entered the hole or if ball hit the obstacle.

GameMenus.cs - It is used for navigation through different menus.

LevelRotate.cs - It is used to rotate level using the mouse or finger on mobile devices.

LevelSelectButtonStars.cs – It is used to show unlocked stars on each level in “level select” menu.

ScoreCounting.cs – It is used for counting the score on the end of the level.

Sound.cs – it is placed on “Sound” game object in scene hierarchy and it is used to keep that game object on the scene whole time.

StarFrame.cs – It is used at the end of the level to show simple animation when star is unlocked.

TimerCountDown.cs – It is used to countdown time left to complete the level.

TittleAnimation.cs - Zoom in and zoom out animation on the tittle in the main menu.

UnlockLevel.cs – It is used in level select menu to unlock all levels that user has completed plus the next one.

Vars.cs – Used for static variables.
